

Report Output Types

The report output type determines the format of the report and where data can be pulled from. Only [Dashboards](#), [Custom Summary Reports](#), and [Excel Reports](#) can include data from more than one table in the same report.

You can create a report for a single table in any of the available output types:

- [Graphical Charts](#)
- [HTML and Text Reports](#)
- [Excel Reports](#)
- [Custom Summary Reports](#)

These pages provide details about the configuration that is specific to that output type. For information about the other settings available in the wizard, see [Create and Edit Charts and Reports](#).
